HEAT RECOVERY

208-230/460V

"SIMPLICITY IS THE
ULTIMATE SOPHISTICATION"
— LEONARDO DA VINCI

SIMPLE. SUSTAINABLE. CONNECTED.

THE NEXT GENERATION OF VRV IS HERE

SIMPLE. SUSTAINABLE. CONNECTED.

From the makers of VRV

Daikin VRV EMERION is available in single and dual-module lineups. The introduction of new 16-20 T single modules allows a system capacity of up to 40 Tons with just two modules. This helps reduce the overall space required for mechanical equipment and optimizes total project costs.

Features and benefits

- » New Simple and Stylish design with expanded line up with single-module units from 6 – 20 T and dual-modules up to 40 T.
- » Space-saving 16 – 20 T single module units provide up to 34% footprint and up to 500 lbs./unit weight reduction compared to previous series².
- » High energy efficiency with IEERs up to 30.0 delivers up to 30% efficiency increase compared to previous VRV systems².
- » Year-round comfort and energy savings with Daikin's Variable Refrigerant Temperature technology (VRT), compared to standard VRF and previous VRV systems.
- » Increased piping lengths of up to 361 ft. vertical separation between ODU and IDU provide additional application flexibility compared to previous VRV systems¹.
- » Heating down to -13°F as standard and high heating capacities at 17°F make it an ideal choice for all-electric heat pump solutions.
- » Continuous heating during defrost capability with single module (16 T – 20 T) and all dual module systems¹.
- » Hot gas defrost circuit allows for installation without base pan heater.
- » Sealed e-box design with an ingress protection rating of IP55 provides for high dust and moisture protection.
- » Dual-fuel ready with connectivity to Daikin communicating gas furnace or all-electric heat pump heating for optimized operational costs based on utility rates.
- » Design flexibility to enlarge system from single to a dual-module without changes to installed main pipe sizes for phased installation or tenant fit-out buildings.
- » Meets several local code compliance certifications such as OSHPD Seismic, Miami Dade Wind, and Chicago pressure relief codes.
- » Reduced wiring costs with up to 34% reduction in MCA values compared to previous series.
- » Engineered for ease of installation and service with three-segment panel design.
- » Enhanced installation and serviceability with increased space for easy field piping connections to service valves¹.
- » Simplified diagnosis with built-in data recorder which stores up to 45 minutes of operational data.
- » Integrates with new Daikin HERO ecosystem, an IoT-based remote monitoring and diagnostics platform.
- » Currently available for heat recovery applications in 208/230V or 460V.

¹ Refer to engineering and installation manuals for application rules.

² Model specific; check product specification for details.

* Complete commercial warranty details available from your local distributor or manufacturer's representative or at www.daikincomfort.com or www.daikinac.com.

Enhanced lineup

Daikin VRV EMERION is available in single and dual-module lineups. The introduction of new 16-20 T single modules allows a system capacity of up to 40 Tons with just two modules. This helps reduce the overall space required for mechanical equipment and optimizes total project costs.

SINGLE MODULES

DUAL MODULES

22 – 28 T

30 T

32 – 40 T

Simple, Yet Sophisticated

Elevate projects with design simplicity

VRV EMERION's new larger capacity single module units offer opportunities to reduce the space required for mechanical equipment and the number of electrical and piping connections. By leveraging Daikin's increased piping lengths, the new design allows up to 361 ft. (110 m) of vertical separation (equivalent up to approximately 30 floors). In addition, VRV EMERION's new expanded 361 ft. vertical separation opens opportunities to now address buildings up to 720 ft. (equivalent up to approximately 60 floors) when units are placed both on the roof and base of the building.

WEIGHT: 1745 LBS.

**Footprint: 20% less
Weight: 20% less**

Up to 34% and 30% reduction in system footprint and weight respectively to installed systems of similar capacity as compared to the previous series.*

* Model specific; check product specification for details.

Return valuable leaseable space to building owners and living space to tenants

Longer vertical piping lengths

PIPING LIMITATIONS Liquid Line Max (ft.)		VRV EMERION
		Heat Recovery
(A)	Vertical Drop	164 (361) ¹
(B)	Vertical Rise	130 (361) ¹
(C)	Between IDU	100 (49) ³
(D)	From 1st Joint	130 (295) ²
(E)	Linear Length	540
	Total Network	3280

¹ Field setting changes and upsizing are required above 164 ft. (vertical drop) and 130 ft. (vertical rise). Refer to Installation Manual for details.

² Upsizing is required for extension up to 295 ft. Refer to Installation Manual for details.

³ Rules may apply above 49 ft.; refer to Installation Manual for details.

Design and Installation Flexibility

Engineered to create a truly unique experience for contractors, *VRV EMERION* offers a new and improved design to provide ease of service and maintenance making way for simplicity in installation.

SERVICE WINDOW:

- » For easy access to the multi-functional digital display for easy commissioning and troubleshooting.
- » Coating applied on printed circuit board for protection against dust and water.

REMOVABLE SECTION 3: MECHANICAL

- » Remove the bottom panel independently from the above two sections to directly access essential mechanical components, such as compressors, for ease of servicing.
- » Dedicated wiring and refrigerant knock-outs designed for quick access and ease of installation.

NEW P-TYPE COMPRESSOR

- » Compressor technology with spiral design and injection valves for precise refrigerant control.
- » Strong and efficient motors for optimized compressor performance and part load efficiencies.
- » Back pressure control mechanism optimizes the internal compressor pressure with the intermediate pressure adjusting port according to operating conditions. This stabilizes the orbiting scroll, reducing leaks and scroll friction during operation (compared to compressors without back pressure control).

Dedicated refrigerant connection knock-outs.

REMOVABLE SECTION 1: AIRFLOW

- » Quick removal of top panel for outdoor fan servicing.

REMOVABLE SECTION 2: ELECTRICAL

- » Offers contractors quick access to electrical components.
- » Sealed e-box design with an ingress protection rating of IP55 provides for high dust and moisture protection.
- » Built-in data recorder to store up to 45 minutes of operational data.

Dedicated wiring knock-outs available for quick access.

Phased installation

VRV EMERION delivers enhanced design flexibility thanks to its ability to expand with the building's phased construction.

- » Expand the system without changes to main pipe sizes that are already installed.
- » Help reduce initial capital and design complexity compared to systems that do not offer phased installation.
- » Optimize piping design, branch selector boxes, and indoor units per phase of installation.

Installation Space

- » During installation, install the units using the most appropriate of the patterns shown in the figure for the location in question, taking into consideration human traffic and wind.
- » If the number of units installed is more than that shown in the pattern in the figure, install the units so that there is no air short circuiting.
- » Consider the space needed for the refrigerant piping when installing the units, as determined by local codes.
- » If the space requirements in the figure do not apply, contact your contractor or Daikin directly.
- » The installation space requirement shown in the figure is a reference for cooling. Refer to Installation and Engineering Manuals for further details and layouts.

Hail Guard Kits

The optional hail guard kit for *VRV EMERION* enables optimal airflow for efficient heat transfer while providing condenser coil protection from hail damage in severe climates. Each hail guard kit, that is field installed, consists of 4 panels (Right, Left, Front and Back).

HAIL GUARD KITS - NUMBER OF KITS REQUIRED FOR EACH OUTDOOR SYSTEM

		REYQ360AA	Dual	1	1
		REYQ384-480AA	Dual		2

Snow/Wind Hood Kits

The optional Snow/Wind Hood Kits mount to *VRV EMERION* series units over the heat exchanger coil to protect from snow build-up and wind in cold climates. The Hoods install easily to condensing units using existing screw taps with no modification required. Different kits can be ordered for different job requirements per table below.

SNOW/WIND HOOD KITS - NUMBER OF KITS REQUIRED FOR EACH OUTDOOR SYSTEM

Pressure Relief Valve Kit for Chicago Municipal Code

VRV EMERION is designed to comply with the Chicago Municipal Code's pressure relief valve requirement. Customers can order the optional pressure relief valve kit and easily install it without any brazing or refrigerant removal on a jobsite.

Kit Number

DPRK06

Adaptive and learning VRT

The new *VRV EMERION* system features a newly enhanced learning VRT technology. The new learning VRT technology, in addition to helping with annual energy efficiency and maintaining comfort, provides features that enable time-based learning to adjust cooling and heating capacities to provide a stable capacity to the indoor units. The feature must be activated through field setting changes.

How is energy reduced?

A standard variable refrigerant flow system and previous Daikin *VRV* systems utilize a capacity based control logic where the system will adjust to meet the capacity requirements of the space. With VRT, Daikin has optimized focus not only on capacity but also on efficiency and comfort.

According to changes in the room's heat load and the ambient air temperature, the evaporating temperature (in cooling) and condensing temperature (in heating) are automatically adjusted to minimize the difference with the condensing temperature and the evaporation temperature, respectively.

This makes the compressors work less and also enables the system to always maintain the ideal compressor speed so that the Daikin *VRV* system can deliver the optimum efficiency.

Refrigerant cycle during cooling

Fine control to match user preference available through mode selection

Capacity priority

Energy saving priority

Selecting VRT enables operation to be optimised for either energy efficiency or rapid cooling:

- » Can boost capacity above 100% if needed.
The refrigerant temperature can go lower in cooling than the set minimum.
- » Gives priority to very fast reaction speed.
The refrigerant temperature goes down fast to keep the room setpoint stable.

- » Gives priority to fast reaction speed.
The refrigerant temperature goes down fast to keep the room setpoint stable.

- » Gives priority to efficiency.
The refrigerant temperature goes down gradually giving priority to the efficiency of the system instead of the reaction speed.

Continuous heating during defrost*

- » Each outdoor unit heat exchanger goes into defrost mode at different times so continuous heating is maintained — avoiding discomfort indoors.
- » Reduces cold drafts.
- » No extra energy for reheating indoors, piping & zone (compared to variable refrigerant flow systems without continuous heating during defrost).

*Refer to engineering and installation manuals for application rules.

SINGLE MODULE (16 - 20 T)
CONTINUOUS HEATING DURING DEFROST

DUAL MODULE (22 - 40 T)
CONTINUOUS HEATING DURING DEFROST

Hot Gas Defrost Technology

The Hot Gas Defrost circuit at the bottom of the heat exchanger eliminates the need for a base pan heater. This unique technology helps improve defrost, condensate disposal, and reduce ice accumulation at the bottom of the coil. This allows for reliable and efficient system operation year-round.

Inverter Board Cooled by Refrigerant Circuit.

Minimum influence on electronics from ambient temperature. Section of the coil in the unit is permanently set as condenser for cooling of the inverter board.

DZK (Daikin Zoning Kit)

The optional DZK increases the flexibility of the Daikin VRV and SkyAir systems in both residential and commercial applications by adding a Zoning Box to an indoor unit fan coil, allowing several separate ducts to supply air to different individually controlled zones. The DZK BACnet™ Interface module will work with any BACnet™/IP compatible Building Management System.

DZK Zoning Box for
FXMQ_TB and
FXSQ indoor units

DZK Wired, Wireless,
and Wireless Lite
thermostat options

Dual Fuel with Gas Furnace Connectivity

Expanding *VRV* into applications that were limited to gas-based heating, *VRV EMERION* is a 3-phase dual-fuel VRF system that integrates with communicating gas furnaces. *VRV EMERION* offers outstanding design flexibility when connected to Daikin communicating 80%, 96%, and 97% AFUE gas furnaces and CXTQ coils. The new *VRV EMERION* enables the use of *VRV* technology to provide utility cost-based heating solutions. With the flexibility to switch between electric heat pump heating and gas heating, operational costs can be optimized to building owner's choice for a heating source.

- » Space-saving with ability to connect multiple gas furnaces to one outdoor unit with 14 selectable settings.
- » Customizable changeover temperatures to switch from heat pump to gas heat.
- » Ability to provide system-wide heating independent of outdoor ambient temperature.

CXTQ all aluminum coil features

- » **Available in 2, 3, 4, and 5-Ton capacities.**
- » **Factory installed electronic expansion valve** with PID control loop for precision capacity control.
- » **Seamless integration** to full suite of Daikin controls using onboard control board.
- » **Air cleaner and humidifier** integration capable¹.
- » **UV and rust resistant**, 5VA rated thermoplastic drain pan with integrated secondary drain.
- » **Foil-faced insulation covers** internal casing to reduce cabinet condensation.
- » **Split seam front** for easy installation and service access.
- » **Light weight** all aluminum evaporator coil.
- » **Ships factory standard up flow** with easy field conversion to downflow¹.

¹ Rules apply, refer to installation manual for details.

80-97% AFUE communicating gas furnace

- » **Durable heat exchanger** – Unique tubular stainless-steel construction formed using wrinkle-bend technology results in an extremely durable heat exchanger. Paired with a stainless-steel secondary heat exchanger, this combination provides for reliability, durability and efficiency.
- » **Modulating gas valve** – Operates between 35%-100% capacity, providing precise efficiency and the ultimate in comfort.
- » **Continuous air circulation** – Provides filtration and keeps air moving throughout your home to help maintain comfort.
- » **Self-diagnostic control board** – continuously monitors the system for consistent, reliable operation.
- » **Quiet, variable-speed induced draft blower** – provides precise control and enhanced energy-efficient performance as compared to single-speed blowers.

Applied AHU & FCU Connectivity

Connect non standard *VRV* terminal units and AHUs with Daikin *VRV EMERION* leveraging Daikin Air Handling Unit Integration Kit to extend benefits of inverter technology to custom terminal units and AHUs. A kit consists of One Control Box and One EEV box. Offered via EKEQMCBAV3-US.

EKEQMCBAV3-US

For use with both Daikin *VRV* indoor units and custom air handling units.

- » Seamless integration of non standard *VRV* air handling units with *VRV EMERION* HR systems.
- » Enables control of the AHU as a *VRV* Indoor unit when integrated with a Daikin remote control.
- » Connect other *VRV* indoor units along with the AHU to the condensing units.
- » Provides remote ON/OFF option when integrated with optional KRP4A71 board.
- » Designed for both indoor and outdoor installations.

Branch Selector Boxes

Providing flexibility and minimizing mechanical and electrical installation costs, Daikin's branch selector boxes that are used in Heat Recovery systems, are ideal for spaces that require individual heating and cooling control.

LOCALIZED CONTROLS

Daikin *One+* Smart Thermostat

The Daikin *One+* smart thermostat can control VRV systems with the expansion of apps and programmable technology. The Daikin *One+* is a cloud-connected hub of sophistication, designed for controlling temperature, humidity, and air quality. Control your air remotely, all the time, with this intelligent HVAC thermostat from Daikin.

Navigation Remote Controller

The *Navigation* Remote Controller has been enhanced to meet the configuration requirements of Daikin's VRV indoor units. The *Navigation* Remote Controller provides all the great features and options the market requires. The configurable display and operation buttons will provide as much or as little control as the project requires.

NEW! Daikin *Madoka* Remote Controller

The *Madoka* Remote Controller is a redesigned controller that retains the advanced functions for indoor unit control. The *Madoka* features a sleek and stylish design with an intuitive interface including touch button control. It can be commissioned and managed with ease through a Bluetooth® configuration app or via the onboard menus.

NEW! Daikin DKN Plus Interface

The new Daikin DKN Plus Interface enables the energy-efficient control of Daikin air conditioners by a third-party thermostat or an automation system. With this interface, third-party devices or systems can control the VRV, *SkyAir*, Single Zone and Multi-Zone indoor units through the DKN NA App, Cloud API, Modbus®, BACnet™ MS/TP, or thermostat relay contacts.

NEW! Daikin DKN Cloud Wi-Fi Adaptor

The DKN Cloud Wi-Fi Adaptor enables the remote control of your Daikin indoor units through an iOS/Android App. With the app, the DKN Cloud Wi-Fi Adaptor provides remote control and monitoring of indoor units' ON/OFF, mode, set-point, fan speed, louver position, room temperature, and error alert status from an iOS/Android smartphone.

NEW! Daikin *Adaptive Touch Controller (ATC)*

The *ATC* is used to control VRV, *SkyAir*, Single and Multi-Zone systems (P1P2) with advanced and configurable control logic. The *ATC* comes in 4 different models with a built-in temperature sensor, humidity sensor, CO₂ sensor, and occupancy sensor. The *ATC* will also provide analog input, analog output, digital input, and digital output terminals to monitor auxiliary sensors and control auxiliary equipment. The built-in sensors can be combined with advanced logic to create actionable tasks based upon the sensor values. The *ATC* controller can be integrated with a compatible building management system (BMS) using BACnet™ MS/TP.

CENTRALIZED CONTROLLER

Daikin *intelligent Touch Manager (iTM)*

The *intelligent Touch Manager (iTM)* is an advanced multi-zone controller that controls and monitors the Daikin **VRV** system. The *iTM* can also provide a cost-effective mini Building Management System (BMS) solution to integrate and control third party devices through option a software and hardware. If a BMS exists, the *iTM* can be used as a BACnet™ gateway interface for BMS integration with the *iTM BACnet* Server Gateway option.

REMOTE MONITORING

Daikin **HERO**
Simple Edge

COMING FALL 2022!

Daikin **HERO** Ecosystem

- » Remote monitoring to help manage and diagnose system performance and provide predictive logic.
- » Visualize system performance through the integrated dashboard (web-based access from phone, laptop, and tablet).
- » Streamline service and maintenance for projects.
- » Built-in Verizon® SIM card for cellular communication.

VISUALIZE SYSTEM OPERATION	REMOTE MONITORING	FAILURE PREDICTION	ENVIRONMENTAL PROTECTION
» Visualize system energy consumption » System errors	» Multi-site » Eliminate unnecessary truck rolls » Access system details 24/7	» Compressor » Sensors	» Refrigerant leakage predicting logic » Energy tuning optimizes ODU operation based upon ambient temperature

"LOGIC will get you from A to B. IMAGINATION will take you EVERYWHERE."

Delivering Sustainable Solutions to build a Sustainable society

We believe our mission is to provide comfortable air environments for people around the world while developing products that utilize inverters and lower global warming potential refrigerants (as compared to refrigerants currently in use). We measure our contribution to reducing greenhouse gas emissions based on the distribution of products utilizing inverters and lower global warming potential refrigerants (as compared to refrigerants currently in use). Daikin reduced greenhouse gas by 68 million tons of CO₂ globally, representing a reduction of greenhouse gas emissions of 76% from fiscal 2006 levels. *VRV EMERION* is engineered to provide an all-electric heat pump solution with heating down to -13°F (-25°C) as standard. In addition to high heating capabilities, additional benefits listed below make *VRV EMERION* an ideal choice of commercial HVAC for owners, architects, engineers, and contractors aiming towards sustainable buildings.

- » Inverter technology-driven high efficiencies.
- » Increased piping and design flexibility¹.
- » Simple and space-saving compact design.
- » Three-panel design for easy installation, maintenance, and service.
- » Reduced electrical requirements¹.
- » Reliable IoT-based remote monitoring and predictive operation.

¹ Compared to previous series

Reduced Equipment and Installation Costs*

VRV *EMERION* returns valuable, leasable, livable space to building owners and tenants thanks to the compact modular design. Because overall costs are a critical piece of every project, we've designed the VRV *EMERION* from the ground up to help drive additional cost savings to your projects. For example, with a reduced number of installed modules, a reduction of electrical and piping connections (compared to previous generations of VRV) is possible.

Reduced Electrical*

With up to 34%* reduction in MCA values, VRV *EMERION* offers an opportunity to reduce overall electrical installation costs.

*Compared to previous VRV IV X models.

Reliable operation year-round

VRV EMERION has a wide range of operating ability and performance data covering a broad spectrum of operation range for both cooling and heating. Systems are designed to operate from -13°F to 60°F in heating and from 23°F to 122°F in cooling. When combined with single port or multi port *Flex Branch selector* boxes, the systems can deliver cooling down to -4°F.

In addition to its wide range of operation, VRV EMERION is equipped with advanced features such as continuous heating during defrost and hot gas defrost circuit which offer reliable heating operation without a base pan heater or backup heat in most applications. This also helps reduce installation cost and energy consumption.

Setting the Standards

Over 30 years of VRV history

Daikin invented the first VRV system in 1982 and has continued to set standards in the industry and heighten market expectations. Many of the current market expectations are:

- » Energy efficient inverter compressor .
- » Modular system concept.
- » Heat recovery function.
- » Allow long piping lengths.
- » Heating operation down to -13°F ambient air temperature as standard.
- » Continuous heat during defrost.
- » Auto charge at start up.

VRV was invented in 1982 as a result of the oil crisis around the world in the 70's. Energy efficiency laws were passed by the Japanese government. The Japanese government and Daikin worked closely together — they looked at a chiller system; pumps, and air handlers as well and how the pump circulates water and how it uses a lot of power. So, they came up with a concept to use refrigerant instead of water to circulate as a heat transfer medium. The first VRV heat recovery system was launched in 1991 implementing the landmark concept of a heat pump chiller that circulates refrigerant instead of water.

Tools for Success

The tools have been designed to be simple to use, easily accessible and to address the various considerations and steps in the evolution of a residential or commercial project, aimed at helping the architect, consulting engineer, contractor, installation technician, and service company to enhance workflows and general project execution.

About Daikin:

Daikin Industries, Ltd. (DIL) is a global Fortune 1000 company and is recognized as one of the largest HVAC (Heating, Ventilation, Air Conditioning) manufacturers in the world. Founded in 1924, Daikin is celebrating 100 years of HVAC worldwide leadership. DIL is primarily engaged in developing indoor comfort systems and refrigeration products for residential, commercial, and industrial applications. Its consistent success is derived, in part, from a focus on innovative, energy-efficient, and premium quality indoor climate and comfort management solutions.

Before purchasing an appliance in this document, read important information about its estimated annual energy consumption, yearly operating cost, or energy efficiency rating that is available from your retailer.
